

SharePoint Online Migration Case Study

Large-scale content migration with complex permission structures

600,000+

files migrated to SharePoint Online

100,000

unique permissions handled and validated

End-to-end

discovery, migration, validation and handover

Challenge

- Move a large enterprise content estate to SharePoint Online while protecting business access and continuity.
- Preserve and validate a highly complex permission model without creating avoidable post-cutover risk.

Approach

- Inventory sites, libraries, content volumes, ownership and permission structures before migration.
- Plan controlled migration waves with validation checkpoints, exception handling and stakeholder communication.

Delivery

- Execute content migration, permission verification and post-migration remediation across SharePoint Online.
- Support UAT, access validation, operational documentation and knowledge transfer for support teams.

Outcome

- Successfully migrated more than 600,000 files while handling 100,000 unique permissions.
- Established a structured governance and support handover for ongoing Microsoft 365 operations.
